## Hands-On

# **Ladder Safety**

## **Course Description**

This Hands-On course provides in-depth practical training for ladder safety on conventional and unconventional applications.

When work is performed on elevated surfaces or during construction and service activities, protection on ladders must be considered.

Employers and Contractors are required to have and or provide a training course for each employee who might be working with or on ladders. The course must provide each person to recognize the risks and hazards of using ladders and their working environment to provide solutions to minimize these risks and hazards.

This course is a practical all Hands-On course. This training not only protects the individual but it also provides protection for the company and or contractor(s) from accidents, accidental injuries, deaths and litigation and liabilities.

Ladder Safety and Real-World Application Exercises (Case Studies, Exam, Hands-Field Labs)

#### **Students Will Learn**

- Basic Safety
- Hazard Recognition
- Ladder Specifications
- Ladder Responsibilities
- Ladder Usage
- Ladders on Poles
- Ladders on Strains
- Hole Covers (if applicable)
