Hands-On

CCNA Implementing and Administering Cisco Solutions v1.0

Virtual Live Instructor-led or Available On-Site

Course Description

This extensive Hands-On course is available for Virtual Live Instructor-led or On-Site at your location. This Implementing and Administering Cisco Solutions(CCNA) v1.0 course gives you a broad range of fundamental knowledge for all IT careers. Through a combination of lecture, hands-on labs, and self-study, you will learn how to install, operate, configure, and verify basic IPv4 and IPv6 networks. The course covers configuring network components such as switches, routers, and wireless LAN controllers managing network devices and identifying basic security threats. The course also gives you a foundation in network programmability, automation, and software-defined networking.

This course helps you prepare to take the 200-301 Cisco Certified Network Associate(CCNA) exam. By passing this one exam, you earn CCNA certification.

Students Will Learn

- · Identify the components of a computer network and describe their basic characteristics
- Describe the features and functions of the Cisco IOS Software
- Describe LANs and the role of switches within LANs
- Describe Ethernet as the network access layer of TCP/IP and describe the operation of switches
- Install a switch and perform the initial configuration
- Describe the TCP/IP internet Layer, IPv4, its addressing scheme, and subnetting
- Describe the TCP/IP Transport layer and Application layer
- Explore functions of routing
- Implement basic configuration on a Cisco router
- Explain host-to-host communications across switches and routers
- · Identify and resolve common switched network issues and common problems associated with IPv4
- addressing
- Describe IPv6 main features, addresses and configure and verify basic IPv6 connectivity
- Describe, implement and verify VLANs and trunks
- · Describe the application and configuration of inter-VLAN routing

- Explain the basics of dynamic routing protocols and describe components and terms of OSPF
- Explain how STP and RSTP work
- Configure link aggregation using EtherChannel
- Describe the purpose of Layer 3 redundancy protocols
- Describe basic WAN and VPN concepts
- Describe the operation of ACLs and their applications in the network
- · Configure internet access using DHCP clients and explain and configure NAT on Cisco routers
- Describe the basic QoS concepts
- Describe the concepts of wireless networks, which types of wireless networks can be built and how
- to use WLC
- Describe network and device architectures and introduce virtualization
- · Introduce the concept of network programmability and SDN and describe the smart network management
- solutions like Cisco DNA Center, SD-Access and SD-WAN
- Describe the management of Cisco devices
- Describe the current security threat landscape
- Describe threat defense technologies
- Implement basic steps to harden network devices

Target Audience

This course is designed for anyone seeking CCNA certification. The course also provides foundational knowledge for all support technicians involved in the basic installation, operation, and verification of Cisco networks. The job roles best suited to the material in this course are

Entry-level network engineer Network administrator Network support technician Help desk technician

Prerequisites

The knowledge and skills that students are expected to have before attending this course are

Basic computer literacy

Basic PC operating system navigation skills

Basic internet usage skills

Basic IP address knowledge

There are no formal prerequisites for CCNA certification, but you should have an understanding of the exam topics before taking the exam.

Course Outline

- Section 1: Exploring the Functions of Networking
- Section 2: Introducing the Host-To-Host Communications Model
- Section 3: Operating Cisco IOS Software
- Section 4: Introducing LANs
- Section 5: Exploring the TCP/IP Link Layer
- Section 6: Starting a Switch
- Section 7: Introducing the TCP/IP Internet Layer, IPv4 Addressing, and Subnets
- Section 8: Explaining the TCP/IP Transport Layer and Application Layer
- Section 9: Exploring the Functions of Routing
- Section 10: Configuring a Cisco Router
- Section 11: Exploring the Packet Delivery Process
- Section 12: Troubleshooting a Simple Network
- Section 13: Introducing Basic IPv6
- Section 14: Configuring Static Routing
- Section 15: Implementing VLANs and Trunks
- Section 16: Routing Between VLANs
- Section 17: Introducing OSPF
- Section 18: Building Redundant Switched Topologies
- Section 19: Improving Redundant Switched Topologies with EtherChannel
- Section 20: Exploring Layer 3 Redundancy
- Section 21: Introducing WAN Technologies
- Section 22: Explaining Basics of ACL
- Section 23: Enabling Internet Connectivity
- Section 24: Introducing QoS
- Section 25: Explaining Wireless Fundamentals
- Section 26: Introducing Architectures and Virtualization
- Section 27: Explaining the Evolution of Intelligent Networks
- Section 28: Introducing System Monitoring
- Section 29: Managing Cisco Devices
- Section 30: Examining the Security Threat Landscape
- Section 31: Implementing Threat Defense Technologies
- Section 32: Securing Administrative Access
- Section 33: Implementing Device Hardening

Delivery Method

Instructor-Led with numerous Hands-On labs and exercises.

Equipment Requirements

(This apply's to our hands-on courses only)

BTS always provides equipment to have a very successful Hands-On course. BTS also encourages all attendees to bring their own equipment to the course. This will provide attendees the opportunity to incorporate their own gear into the labs and gain valuable training using their specific equipment.
